

Afternoon Activities – W.B. 18.05.20

Not only is this week the last week of term but it is also the week after what should have been a gruelling SATs week. Normally the year 6 team would be thinking outside the box a little with our afternoon lessons. We have decided to do exactly that for you guys even though we are still in lockdown!

This week, you have two tasks to complete throughout the week. The first task is based on last week's science task 1. We asked you to look at essential and non-essential uses of electricity around your home. This week, we challenge you to try and not use some of those electrical items!

- Could you pick one essential and one non-essential item from your table and try not to use it for just 1 day?
- Are there any items from your table that you could challenge yourself to not use for more than just 1 day? Perhaps even for the whole week?

How did you feel not using these items? Did you have an urge to use them? Did that urge go away the longer you didn't use the item or did the urge get bigger? How did you cope with not using the item? Record your answers to the questions under or on the back of where you put your table from last week.

The theme for your second task is 'Helping around the House'. We have created a timetable (linked below) for you to either print and fill out or to copy and fill out. Next to the timetable is a long list of suggested jobs, some of these may not work for your household and some of you may have other suggestions – that is all fine. We would like you to pick 5 jobs which you wouldn't normally do; write them down in your timetable (1 job per day) and once you have done your job on each day, ask an adult to write a comment.

Doing things to help your adults around the house is especially important during lockdown as not only does it help your limited space feel nicer but it also shows your appreciation for your adults who are working hard to keep you safe and happy. Well done in advance guys!
